

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

The Return does not distinguish the Emigrants born in Great Britain from those born in Ireland.

From this Return it may be inferred that the Emigration from the United Kingdom was not less than—

717,913 in the interval of the Censuses 1831 and 1841, and
1,692,063 in the interval of the Censuses 1841 and 1851.

THE MARRIAGES, BIRTHS, AND DEATHS,
REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF ENGLAND,
AS PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

THIS Return comprises the Births and Deaths registered by 2,189 registrars in all the districts of England during the Winter quarter ending March 31st, 1851; and the Marriages in more than 12,000 churches or chapels, 2,869 registered places of worship unconnected with the Established Church, and 623 Superintendent Registrars' offices, in the quarter that ended December 31st, 1850. The return of marriages is not complete; but the defects are inconsiderable, and have been supplied from previous years.

The results of the returns from the whole country are satisfactory. The mortality is low; the births and the marriages are much above the average.

Of marriages, 45,296 were celebrated in the autumn quarter, ending December 31st. The marriages are always more numerous in this quarter than in any other quarter of the year. The close of harvest, the genial season of Christmas, the termination of the ordinary periods of service, and perhaps the old practice of anticipating Lent, swell the marriage roll at the end of the year. So there is nothing very remarkable in the distribution of the marriages over the quarters of the year 1850, although the marriages in the last quarter exceeded those in the first quarter of the year by nearly 15,000. The marriages of the whole year exhibit an extraordinary increase; in 1840, the number was 122,665; in 1850, it amounted to 152,235. In the four years 1847-8-9-50, the marriages were 135,845, 138,230, 141,599, and 152,235. The first (1847) was a year of great depression and great suffering; the last (1850), as the marriages testify, was a year of prosperity, which showed no symptoms of decline in the last quarter.

The marriages decreased, were stationary, or increased slowly, in many agricultural districts; and this implies a certain degree of depression in those parts at the close of the year 1850. In many of the manufacturing districts, the increase was remarkable. In the country generally, the great increase in the marriages indicates that the great body of the people were in prosperous circumstances. The classes who live on wages should now husband their resources, and with their surplus earnings provide against the periods of depression which, according to past experience, invariably follow years of prosperity.

Of births, 157,374 were registered in the quarter ending March 31st, 1851. This is a greater number of births than was ever registered in any previous quarter; and the increase is distributed over all the divisions of the country, although it was greatest in Cheshire, Lancashire, and Yorkshire. In a few counties, the births exhibit no increase; in the majority, the increase is considerable.

As 157,374 births and 105,446 deaths were registered in the quarter ending March 31st, 1851, an excess is left of 51,928 living. It is the natural increase of the population in three months. And as all the deaths are registered, while all the births are not registered, the difference is less than the actual increase. The variations in the increase of population from fluctuations in the births and deaths since 1847 have been considerable; the excess of births over deaths was 19,704 in the winter quarter ending March 1848, and 51,928 in the corresponding quarter of 1851.

The emigration in the quarter ending March 31st, 1851, from the ports of the United Kingdom at which there are government emigration officers, was 56,072. The emigrants from English ports amounted to 48,929; namely, 1,515 from Plymouth, 4,502 from London, and 42,912 from Liverpool; 2,339 emigrants sailed

from Glasgow and Greenock; 4,804 from Irish ports. It is well known that many Irish emigrants sail from Liverpool*.

STATE OF THE PUBLIC HEALTH.—105,446 deaths were registered in the quarter ending March 31st. This number is less by nearly 15,000 than was registered in the corresponding quarters of 1847 and 1848, and more by 7,000 than was registered in the March quarter of 1850. Taking the increase of population into account, the mortality was slightly below the average. It was at the rate of 2·365 per cent. per annum; whereas the average rate of the quarter is 2·457 per cent. The highest rate of mortality experienced in any winter quarter since 1839 was 2·830, in the cold winter quarter of 1847; the lowest was 2·144, in the mild winter quarter of 1846. The average annual rate of mortality in winter is $2\frac{1}{2}$ per cent. nearly (2·457); the mortality being above this range in town, and below it in country districts. The mortality in the March quarter was somewhat lower than the average in the 117 districts, including the chief towns; and considerably below the average in the 506 remaining country districts. The mortality of the towns was a fiftieth part, and of the country districts a twelfth part, less than the average. The country districts are therefore enjoying more than their usual immunity, while the mortality in the town districts is scarcely reduced at all; yet it was in the town districts that cholera was most fatal, and, according to a common theory, cut off the weakly lives in 1849. The returns show that little impression has yet been made on the mortality of towns, which have practically been left unimproved. The drains, sewers, slaughter-houses, and churchyards, are much the same as they were, and their effects therefore are the same.

The mortality was higher in London than it was in the corresponding quarter of last year. Influenza was epidemic; and the mortality was raised during the weeks of March; 205 deaths were directly ascribed to this disease, which in ordinary seasons is not fatal to more than 50; and many of the 1,612 deaths ascribed to bronchitis were the result of influenza. The epidemic has ceased, and has been slight, compared with that of 1847-8. Measles and hooping-cough have been more, scarlatina less, than usually fatal. Small-pox was fatal in 275 cases, in the greater part of which vaccination had been neglected. Diarrhoea was fatal to 223 persons, dysentery to 30, cholera to 7. It is worthy of note that the winter diarrhoea shows no disposition to decline. The deaths referred to cholera in the five quarters ending March 1847-51, were 3, 9, 516, 8, and 7. Typhus has been more fatal than it was in the March quarter of 1850. The deaths by poison were 29, burns and scalds 100, hanging and suffocation 71, drowning 70, fractures and contusions 163, wounds 34.

Marriages Registered in the Quarters ending December 31st, 1846-50; Births and Deaths Registered in the Quarters ending March 31st, 1847-51, in the Divisions, Counties, and Districts of England.

* Under the head of "sudden deaths," are classed not only deaths described as sudden, of which the cause has not been ascertained or stated; but also all deaths returned by the Coroner in vague terms, such as "found dead," "natural causes," &c., &c.

† In the years previous to 1848, "Worms" and "Infantile Fever" were classed together. The former, of very rare occurrence, is now placed to diseases of stomach, &c.

Miscellaneous.

[Sept.]

METEOROLOGICAL TABLE for the Quarter ending March 31, 1851.

NAME OF THE PLACE.		MEAN PRESSURE OF AIR AT THE LEVEL OF THE SEA.		MEAN AIR PRESCURE OF TO 57 FEET ABOVE THE LEVEL OF THE SEA.		MEAN AIR PRESCURE OF TO 114 FEET ABOVE THE LEVEL OF THE SEA.		MEAN AIR PRESCURE OF TO 171 FEET ABOVE THE LEVEL OF THE SEA.		MEAN AIR PRESCURE OF TO 228 FEET ABOVE THE LEVEL OF THE SEA.
